

## Securit 4400 Software

**The ideal entry level ID card software**

**S**ecurit 4400 is the perfect solution for the low to mid volume user. Each database can hold up to 10,000 records and the software is capable of single or double sided printing. You can add either a photograph or signature to each record.

Securit 4400 software enables card design, data management and card personalisation on demand. You control the complete card issuing process from managing the data to designing the badge layouts. Your template layout can include any graphics, logos, pictures and both static and dynamic text (name, number, expiry date, etc), limited only by your imagination.

Add the required personal data (name, ID number, etc.) and capture the person's photo. This can be done with any Twain/WIA compliant device. Securit 4400 supports 25 barcode types and magstripe encoding.

### Minimum hardware requirements

- Intel Processor 1GHz / AMD 1GHz processor or faster
- 256 MB RAM
- 40GB HDD
- Network card (optional)
