

Visitor Manager Plus

VisiBadge Visitor Manager Plus is the OLE DB package tailored for larger organisations that require full on-site control of all visitors (Visitors, Contractors, Temp Staff etc). Separate modules can be integrated to provide management for the induction and control of contractors incorporating permits-to-work and a room resource management module. VB Visitor Manager Plus can be integrated with your existing database, eliminating the need to have separate databases for each function. Both Access or SQL database platforms are available. Intranet and web-based pre-booking is available as an add-on feature.

Passes on Paper and/or PVC
